“PreCheck” by Lufthansa Cargo

Early documentary check before goods acceptance

Lufthansa Cargo offers an additional service for an accelerated and improved goods acceptance process for eAWB shipments – **PreCheck by Lufthansa Cargo**.

Within this early documentary “PreCheck”, Lufthansa Cargo validates your electronic shipment data (AWB-/HAWB-data) in a multi-level documentary check immediately after transmission to Lufthansa Cargo. PreCheck allows a split of documentary and physical goods acceptance on the timeline. PreCheck comprises extensive **formal and content documentary data checks**, it offers **high transparency on data quality** and the possibility to avoid data clarification needs or data-caused irregularities during goods acceptance with tight deadlines.

PreCheck results are being provided promptly and comprehensively:

- Continuously via **messaging** (FMA, FNA, XFNM)
- **NEW**: Optional as user friendly **e-mail-notification**

Your PreCheck benefit

- Receive qualified and transparent **feedback on your data quality** entirely independent to physical goods acceptance
- In case of any missing or wrong data you will be informed on PreCheck results **close to your data transmission**
- Any identified action required can be **solved by you with a data update** before the freight arrives at export station
- As data quality gets better, **goods acceptance can be accelerated** as most documentary checks have already been performed. Data-driven **risks or irregularities** due to wrong or missing data **can be minimized**

How to benefit from PreCheck?

- PreCheck service is only available for **eAWB shipments (EAP/EAW)**
- Onetime registration (CDB-No. based) in Lufthansa Cargo’s **eServices** as a PreCheck user
- Up to six separate e-mail addresses can be assigned for selected **PreCheck notifications**
- Shipment **tracking** by PreCheck notification settings for operations
- In case some **action requirement** has been identified (wrong or missing data): Just **follow the recommended action** described to fix the data error and transmit corrected data per AWB-/HAWB data update
